Dysfunction of senescence-associated secretory phenotype by MyD88 signaling activation in skin tumors. Certain T cells have a proliferative advantage in skin tumors. Previously, we showed that tumor antigen stimulation activates inflammation-associated Th1 cytokines and the pro-inflammatory cytokine IL-12 in these T cells. In this study, we elucidated the role of the pattern recognition receptors, TLRs, in the proliferation and cytokine production of CD4(+) T cells in skin tumors. The activation of TLRs was assessed in a skin tumor-derived cell line (P2) and in tumor-infiltrating cells (TILs) from melanoma patients. T cells derived from both P2 cells and TILs expressed TLRs and promoted the proliferation of P2 cells and TILs, whereas TLR activation did not induce the proliferation of T cells from normal donors. Tumor Ag-specific proliferation of T cells that infiltrated melanoma lesions was inhibited by TLR agonists. Ligation of TLR also induced the secretion of pro-inflammatory cytokines (IFN-gamma, IL-6, TNF-alpha, IL-17, and IL-21), but not the Th2 cytokine IL-10 or the Th3 cytokine IL-4. P2 cells cultured with conditioned medium that was depleted of TNF-alpha, IFN-gamma, IL-6, IL-17, and IL-21 suppressed the T cell-mediated proliferation of P2 cells. These results revealed that TLR is involved in the proliferation and functional activation of T cells in the skin tumors. TLR signaling could induce a T cell-mediated proliferation of the tumor cells in skin tumors, which may be caused by the tumor-induced functional activation of T cells and Th1 and Th17 cytokines such as IFN-gamma, IL-6, and IL-17 that are induced by TLR signaling.

Some of the best and reliable horror stories I have come across on the internet are the "true ghost stories" like this one, also known as the Jeffrey Dahmer's Ghost. There are multiple witnesses to this story and it was filmed in a cemetery located in Jacksonville, Florida. The Shofar Watchman Cemetery in Jacksonville is also haunted by the
